

BRAMIC

Creative Business Products Ltd.

A Recognized Leader of Innovative Furniture Consoles

(EOC) Emergency Operations Center

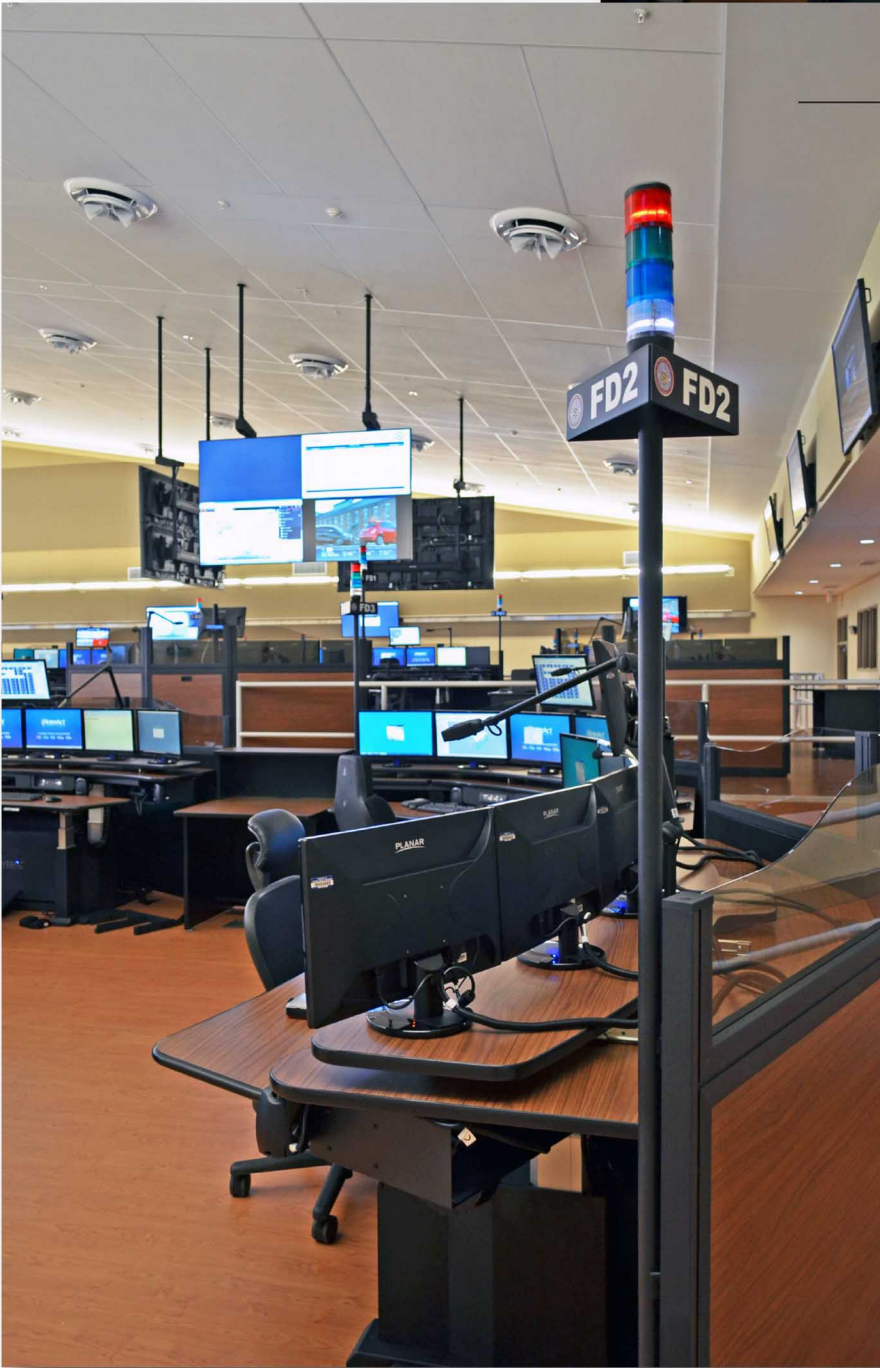

Bramic EOC boardroom tables cleverly combine multipurpose functionality and good looks. EOC tables look and function like a normal boardroom table until required for service. With the simple turn of a key and press of a button the center of the table rises, exposing compartments for hardware storage equipped with certified data, power, and voice connections. The EOC becomes fully functional in approximately 45 seconds.

Training

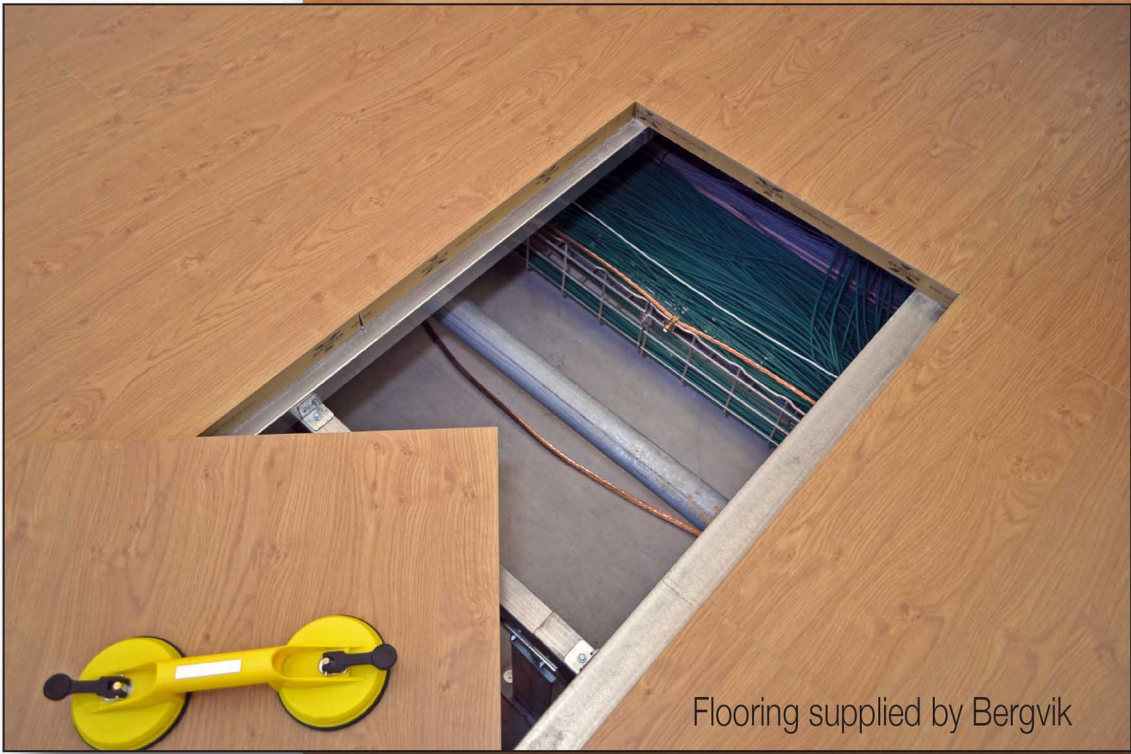

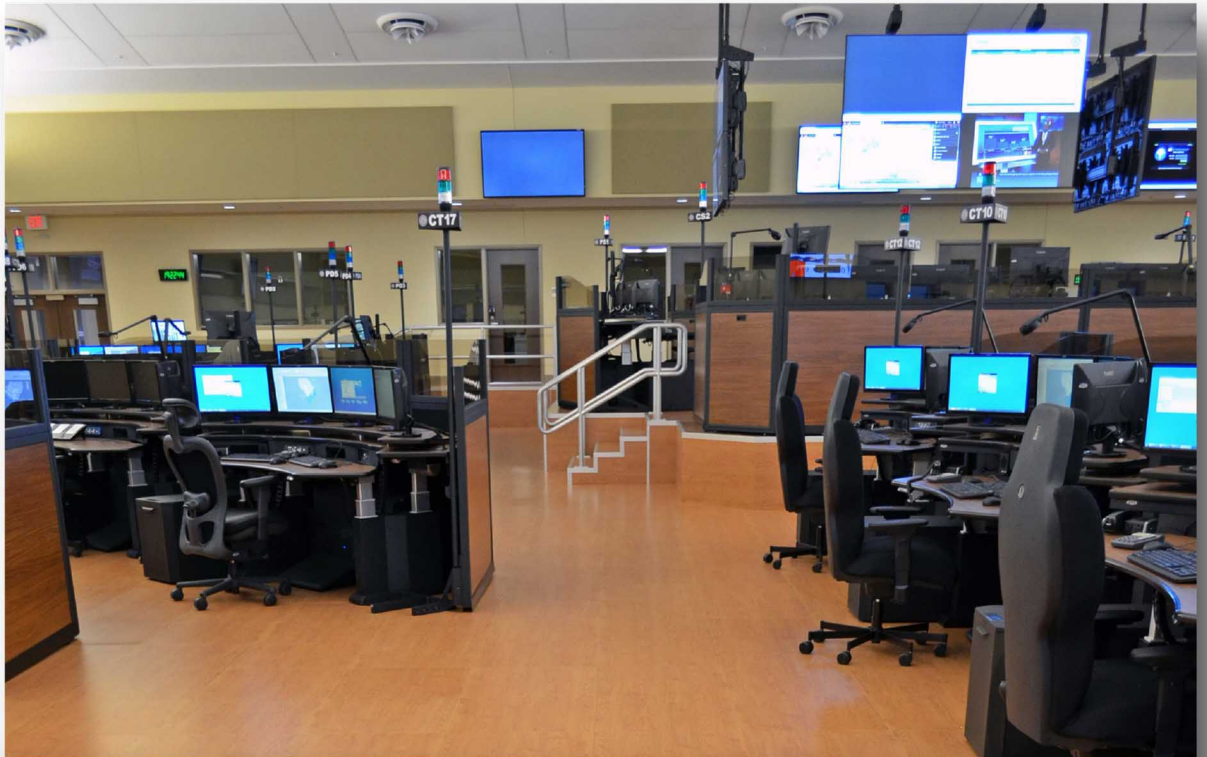

Bramic training tables easily transition from a flat table surface for note taking to a fully functional computer workstation with the press of a button. Hardware, cabling, keyboard, mouse and monitors are securely stored beneath and inside the table in a convenient compartment until required. The uses for these multipurpose tables are limited only by the imagination.

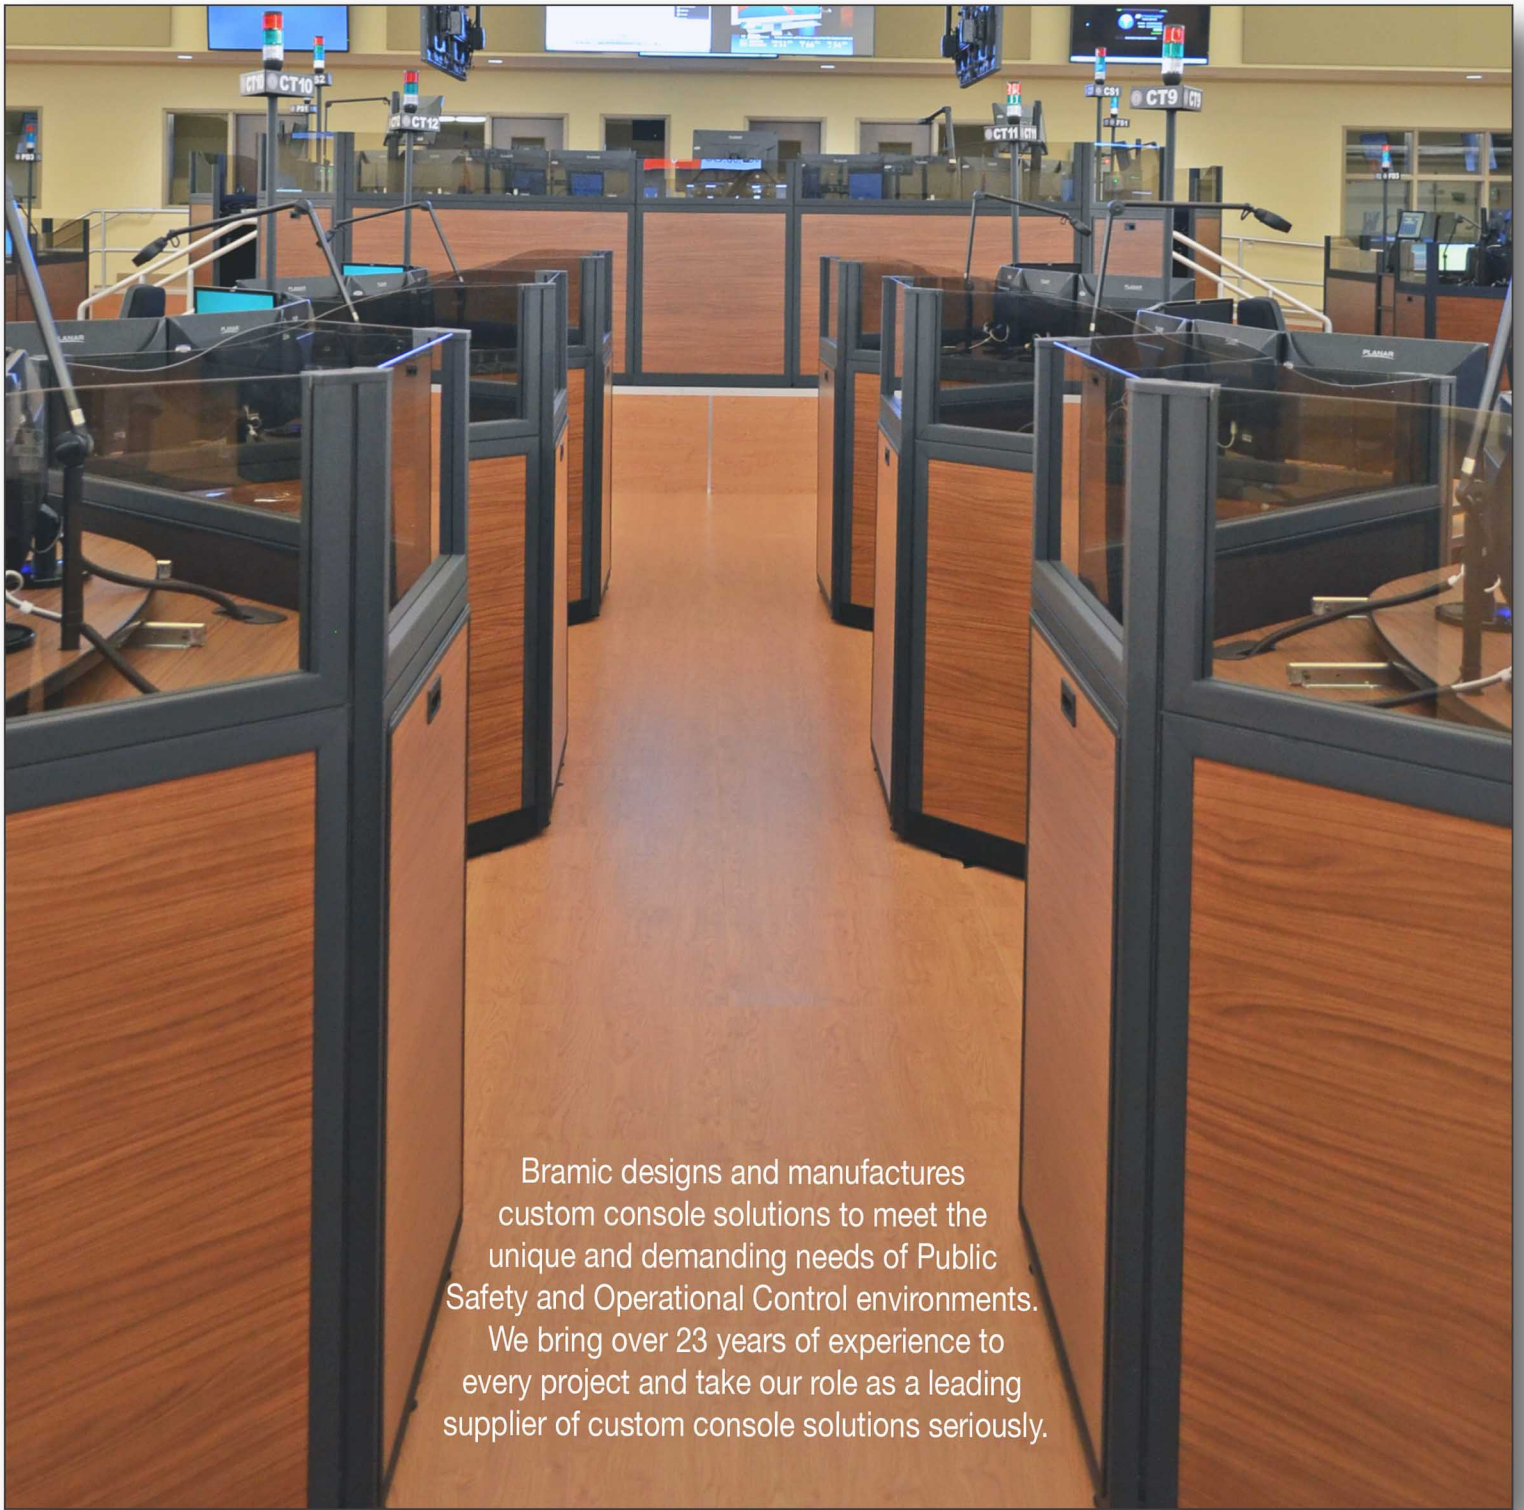

Design

Bramic's unique approach to design includes innovation, quality assurance, and service as core requirements. We design and manufacture all products locally maintaining full control over the design, build, and quality assurance testing processes. Products are fully assembled, inspected, and tested before leaving the facility, significantly reducing installation time and cost on site. Our commitment to service and quality continues throughout the lifecycle of the furniture consoles.

We work one on one with every client to design and build a solution tailored exactly to your specific requirements. Using state of the art graphical design software our team brings your vision to life with high definition 3D images.

You will face any project challenge with confidence knowing you have the full support of your dedicated Bramic team. Our designers work closely with your team to ensure adequate power supply, connection configuration, and access. We cultivate and maintain strong relationships with all contractors involved in the project including engineers, electricians, audio visual, cabling, network, and flooring specialists. The result is an efficient, beautiful, ergonomic, and cost effective working environment. We monitor every detail right down to calculating length of cable runs and training technicians on proper console wiring techniques.

Bramic designs and manufactures custom console solutions to meet the unique and demanding needs of Public Safety and Operational Control environments. We bring over 23 years of experience to every project and take our role as a leading supplier of custom console solutions seriously.
